**Medicine** Kimberly A. Plomp,Charlotte A. Roberts,Sarah Elton,Gilian R. Bentley,2022 The volume aims to encourage more co produced research addressing questions about human health past and present by scholars working in evolutionary medicine EM and palaeopathology It highlights future research that may promote that collaboration between palaeopathology and EM This chapter starts with the premise that EM and palaeopathology have clear synergies in that they take a deep time perspective as they explore health in the past and in the present It introduces the volume and first provides a background to evolutionary medicine from its first appearance in the early 1990s including discussions about ultimate and proximate explanations for disease It then highlights that the field of palaeopathology was initially established much earlier than EM and it is argued that practitioners before the 1990s often physicians were simply not exposed to evolutionary theory in relation to the diseases they were seeing both in the living and in the dead However the stage now looks set for more productive collaborations A thematic overview of the volume and its individual chapters follows within the framework of the suggested categories for study within EM Williams and Nesse 1990 The chapter finishes with some discussion about the One Health initiative EM and palaeopathology an initiative that is considered an essential area of study now and into the future

detailed information rarely appreciated or volunteered by a plaintiff must be painstakingly elicited or developed independently by scrupulous investigation Further it is important to determine whether a plaintiff s initial description of an accident to medical providers EMS ER nurse and physician is reasonably consistent with the litigation version and also our current understanding of the biomechanics of falling accidents In this instance an elderly female purportedly slipped and fell on a wet floor and sustained a severe neck injury which resulted in quadriplegia The prima facie evidence produced by the victim s expert a consulting engineer was compelling albeit simplistically limited to a comparison of the wet and dry static coefficient of friction of the subject floor with Industry Standards The author s examination of other salient contributory factors provided a more defensible rationale with respect to the proximate cause of the plaintiff s falling accident After reviewing the usual litigation documents and measurements of the subject floor s dimensions and slip resistance the investigation focused on the plaintiff s footwear medical records and rather limited recall or awareness of actually slipping or even falling The author concluded that the probability was extremely small that this partly witnessed fall was the product of a slip on a wet surface especially when compared with established biomechanical models Instead it is suggested that the fall stemmed from either a trip stumble or a collapse the sequela of the victim s chronic serious medical problems and recognized age related locomotor deficiencies
