Forensic Recovery of Human Remains Tosha L. Dupras, John J. Schultz, Sandra M. Wheeler, Lana J. Williams, 2011-10-27 This reference now in its second edition is a comprehensive guide that focuses on the practical aspects of excavating and recovering human remains as well as any associated evidence from crime scenes. It highlights the protocols and techniques that are used to successfully survey, map, recover, document, collect, and transport evidence. Almost 200 illustrations are included to help clarify concepts.

Forensic Recovery of Human Remains Tosha L. Dupras, John J. Schultz, Sandra M. Wheeler, Lana J. Williams, 2005-08-23 An essential reference for both forensic experts and non-experts alike. *Forensic Recovery of Human Remains Archaeological Approaches* is a comprehensive guide that focuses on the practical aspects of excavating and recovering human remains along with any associated evidence from crime scenes. It highlights the protocols and techniques that are used to successfully survey, map, recover, document, collect, and transport such items from these locations. Topics include identifying the difference between forensic archaeology and anthropology, employing the correct equipment when conducting searches, recoveries, and excavations, leveraging geophysical technologies used in forensic searches, collecting botanical and entomological evidence, mapping and documenting scenes, and classifying human and nonhuman skeletal remains. The authors present this information in a thorough yet straightforward manner for those who are experienced in the field of forensic recovery and for those who may not yet be as seasoned. In either situation, if you want to be confident that you have uncovered and carefully processed every bit of potential evidence at the scene, then *Forensic Recovery of Human Remains Archaeological Approaches* is the one reference to have with you every time.

The First Stones William Britnell, Alasdair Whittle, 2022-12-01 *The First Stones* brings together the results of recent research on the Neolithic long cairns lying in the shadow of the Black Mountains in south-east Wales, focusing upon Penywyrldod and Gwernvale, the two best-known tombs within the group previously excavated in the 1970s. Important results lie in both new site detail and reassessment of the wider context. Small-scale excavation, geophysical survey, and geological assessment at Penywyrldod, the largest of the Welsh long cairns, gave further information about the distinctive external and internal architecture of the monument. In turn, this opened the opportunity to reassess the pre-monument sequence at Gwernvale with re-examination of both Mesolithic and Neolithic occupations, including a timber structure and midden, lithic, and pottery.

assemblages and cereal remains The frame for wider reassessment is given by fresh chronological modeling both of the monuments themselves suggesting a sequence from Penywyrldod and Pipton to Ty Isaf and Gwernvale probably spanning the 38th to the 36th or 35th centuries cal BC and of early Neolithic activity in south Wales and the Marches probably beginning in the 39th century cal BC A detailed study of the major assemblages of human remains from the Black Mountains tombs includes evidence for diet trauma and lifestyles of the populations represented Recent isotope analysis of human remains from the tombs is also reviewed implying social mobility and migration within local populations during the early Neolithic The First Stones makes a significant contribution to the study of tomb building treatment of the dead place making the relationship of monuments to landscape local and regional identities connections and affiliations across southern Britain and the adjacent continent and Neolithization in western Britain Viewed within the context of tombs within the Cotswold Severn tradition as a whole it leads to an appreciation of the local and regional distinctiveness of architecture and mortuary practice exhibited by the tombs in this area of south east Wales emerging as part of the intake of a significant inland area in the early centuries of the Neolithic

Ethical Approaches to Human Remains Kirsty Squires, David Errickson, Nicholas Márquez-Grant, 2020-01-01. This book is the first of its kind, combining international perspectives on the current ethical considerations and challenges facing bioarchaeologists in the recovery, analysis, curation, and display of human remains. It explores how museum curators, commercial practitioners, forensic anthropologists, and bioarchaeologists deal with ethical issues pertaining to human remains in traditional and digital settings around the world. The book not only raises key ethical questions concerning the study, display, and curation of skeletal remains that bioarchaeologists must face and overcome in different countries but also explores how this global community can work together to increase awareness of similar and indeed disparate ethical considerations around the world and how they can be addressed in working practices. The key aspects addressed include ethics in bioarchaeology and forensic anthropology, the excavation, curation, and display of human remains, repatriation, and new imaging techniques. As such, the book offers an ideal guide for students and practitioners in the fields of bioarchaeology, osteoarchaeology, forensic anthropology, medical anthropology, archaeology, anatomy, museum, and archive studies, and philosophy, detailing how some ethical dilemmas have been addressed and which future dilemmas need to be considered.
