Forgotten Grasslands Of The South Natural History And Conservation:

Forgotten Grasslands of the South Reed F. Noss, 2012-12-03 *Forgotten Grasslands of the South* is the study of one of the biologically richest and most endangered ecosystems in North America. In a seamless blend of science and personal observation, renowned ecologist Reed Noss explains the natural history of southern grasslands, their origin and history, and the physical determinants of grassland distribution, including ecology, soils, landform, and hydrology. In addition to offering fascinating new information about these little-studied ecosystems, Noss demonstrates how natural history is central to the practice of conservation. Although theory and experimentation have recently dominated the field of ecology, ecologists are coming to realize how these distinct approaches are not divergent but complementary, and that pursuing them together can bring greater knowledge and understanding of how the natural world works and how we can best conserve it. This long-awaited work sets a new standard for scientific literature and is essential reading for those who study and work to conserve the grasslands of the South, as well as for everyone who is fascinated by the natural world.

Ecological Restoration and Management of Longleaf Pine Forests L. Katherine Kirkman, Steven B. Jack, 2017-09-27 *Ecological Restoration and Management of Longleaf Pine Forests* is a timely synthesis of the current understanding of the natural dynamics and processes in longleaf pine ecosystems. This book beautifully illustrates how incorporation of basic ecosystem knowledge and an understanding of socioeconomic realities shed new light on established paradigms and their application for restoration and management. Unique for its holistic ecological focus rather than a more traditional silvicultural approach, the book highlights the importance of multi-faceted actions that robustly integrate forest and wildlife conservation at landscape scales and merge ecological with socioeconomic objectives for effective conservation of the longleaf pine ecosystem. **A**

Delicious Country Scott Huler, 2019-02-05 In 1700, a young man named John Lawson left London and landed in Charleston, South Carolina, hoping to make a name for himself. For reasons unknown, he soon undertook a two-month journey through the still-mysterious Carolina backcountry. His travels yielded *A New Voyage to Carolina* in 1709, one of the most significant early American travel narratives rich with observations about the region's environment and Indigenous people. Lawson later helped found North Carolina's first two cities, Bath and New Bern, became the colonial surveyor general, contributed specimens to what is now the British Museum, and was killed as the first casualty of the Tuscarora War. Yet despite his great contributions and remarkable history, Lawson is little remembered even in the Carolinas he documented. In 2014, Scott Huler made a surprising decision to leave home and family for his own journey by foot and canoe, faithfully retracing Lawson's route through the Carolinas. This is the chronicle of that unlikely voyage, revealing what it's like to rediscover your own home. Combining a traveler's curiosity, a naturalist's keen observation, and a writer's wit, Huler draws our attention to people and places we might pass regularly but never really see. What he finds are surprising parallels between Lawson's time and our own, with the locals and their world poised along a knife edge of change between a past they can't forget and a future they

can't quite envision **Cohabiting Earth** Joe Gray, Eileen Crist, 2024-11-01 The eco catastrophes that we are witnessing today starkly demonstrate how the interests of the Earth's currently dominant species are in lockstep with those of nature's wider whole. Simply stated, humans and the more-than-human world have a shared fate. Just as humanity's unrestrained overreach in the ecosphere is driving a mass extinction event and causing the devastation of lifeforms and places, so it is also jeopardizing the prospect of a human future worth living. There is no humans-versus-nature tradeoff; the wellbeing of both is inseparably entwined. Solutions to the shared predicament of all Earth's beings will thus necessarily be those that strive for harmony between human presence and the rest of nature. This applies to the philosophy we adopt for agriculture, the ways in which human economies operate, our patterns of consumption, and numerous other intertwined threads of our existence. This anthology argues that harmony between humanity and our home planet must be built on the pillars of restraint, respect, and reverence.

Make a Home for Wildlife Charles Fergus, 2019-01-01 Make a Home for Wildlife helps you see your property in new ways and is the resource you need to take the sometimes daunting steps to improve the quality of your land. According to U.S. Forest Service, 250 million acres of woods and forests in the U.S. are privately held by 10 million individuals/families. Whether you live on a quarter-acre lot in the suburbs, own a 20-acre woodland retreat, run a farm of 100 acres, or belong to an outdoor club with hundreds or thousands of acres, you can make changes to the land improvements that will turn your property into a better home for wildlife. Habitat projects can be simple or complex, short-term or spanning decades. Cost can be minimal, a few hours of your time spent doing pleasant work in the outdoors, or can run into the hundreds or thousands of dollars. And there is funding to help landowners make wildlife habitat. Focusing on the eastern U.S. from Canada to Florida and west to the Great Plains, this book describes basic habitat types: forest, shrublands, grasslands, and wetlands, and highlights over 150 select native and introduced trees, shrubs, and plants, and explains how they are used or not by wildlife. The book includes 100 profiles of prominent and interesting species of insects, reptiles, amphibians, birds, and mammals, with info on animals and their habitat needs. Large and small mammals, resident and migratory birds, and insects are covered. Fergus relates stories of landowners who have made habitat in different states and regions in different ways.

Encyclopedia of the World's Biomes, 2020-06-26 Encyclopedia of the World's Biomes is a unique five-volume reference that provides a global synthesis of biomes, including the latest science. All of the book's chapters follow a common thematic order that spans biodiversity, importance, principal anthropogenic stressors, and trends, changing climatic conditions, and conservation strategies for maintaining biomes in an increasingly human-dominated world. This work is a one-stop shop that gives users access to up-to-date, informative articles that go deeper in content than any currently available publication. Offers students and researchers a one-stop shop for information currently only available in scattered or non-technical sources. Authored and edited by top scientists in the field. Concisely written to guide the reader through the topic. Includes meaningful illustrations and suggests further reading for those needing more specific information.

Noss,2018-05-15 An overview of the importance of fire to ecosystems in the Southeast with guidance on how to best conduct controlled burns in the region A biodiversity hotspot Florida is home to many ecosystems and species that evolved in the presence of frequent fire In this book Reed Noss discusses the essential role of fire in generating biodiversity and offers best practices for using fire to keep the region s ecosystems healthy and resilient Reviewing several lines of evidence Noss shows that fire has been important to the southeastern Coastal Plain for tens of millions of years He explains how the region s natural fire regimes are connected to its climate high rate of lightning strikes physical chemistry and vegetation But urbanization and active fire suppression have reduced the frequency and extent of fires Noss suggests the practice of controlled burning can and should be improved to protect fire dependent species and natural communities from decline and extinction Noss argues that fire managers should attempt to simulate natural fire regimes when conducting controlled burns Based on what the species of the Southeast likely experienced during their evolutionary histories he makes recommendations about pyrodiversity how often and in what seasons to burn the optimal heterogeneity of burns mechanical treatments such as cutting and roller chopping and the proper use of fuel breaks In doing so Noss is the first to apply the new discipline of evolutionary fire ecology to a specific region This book is a fascinating history of fire ecology in Florida an enlightening look at why fire matters to the region and a necessary resource for conservationists and fire managers in the state and elsewhere **The Journal of the Bombay Natural History Society** Bombay Natural History Society,2005 **The Wiltshire Archaeological and Natural History Magazine** ,2009 **Transactions of the Natural History Society of Northumbria** ,1996 *'Lost Worlds' Or 'lost Causes'?* Pamela D.
