Elastin And Elastic Tissue Advances In Experimental Medicine And Biology:

Elastin and Elastic Tissue L. Sandberg, 2012-12-06 Although elastin was first identified and purified in 1840 relatively few major advances to determine its structure and function occurred between then and 1970 This was pointed out by Carl Franzblau in his recent review 1 This sad state of affairs does not detract however from the importance of contributions made during the last 50 years many of these are referred to in the various chapters that comprise this monograph I would be remiss not to emphasize the pioneering work of S M Partridge who in 1955 reported on a technique to obtain virtually pure elastin It was indeed a privilege to have the participation of Dr Partridge in the First International Conference on Elastin the proceedings of which constitute this volume In 1974 the Division of Lung Diseases of the National Heart Lung and Blood Institute initiated a targeted research program on Isolation and Purification of Lung Elastin It was an asset to the program that it attracted eminent scientists who in effect stimulated a new wave of interest and activity in this neglected area of research This resurgence of interest may have been due to the challenge of working with a tissue that presented difficulties which had in the past discouraged investigators It soon became apparent that the research program initiated by the Division of Lung Diseases was attracting much interest and that many significant contributions would result from it

Atherosclerosis V A. M. jr Gotto, L. C. Smith, B. Allen, 2012-12-06 The objective of the program committee of the Fifth International Symposium on Atherosclerosis was to bring together experts in many disciplines to broaden the scope of the attack on this disease and to foster interaction Our hope was that such interaction would accelerate the eradication of the disease The symposium achieved that objective and continued the tradition of the previous symposia in providing a forum for summaries of recent research developments in the study treatment and prevention of atherosclerosis The leading authorities and researchers in this field and in the related areas of interest have presented the newest information concepts and ideas that have evolved in the past three years since the previous meeting in Tokyo The most promising fields for future investigation are clearly identified as are the nature of the controversies that persist in some highly important aspects of treatment of this disease The appearance of these proceedings so soon after the meeting will greatly enhance the impact of the symposium on current research in atherosclerosis The program committee is particularly indebted to the excellent response of the investigators for their willingness to participate in the symposium and for their successful efforts in bringing high quality to their presentations Their cooperation in the expeditious delivery of manuscripts for this volume has been particularly gratifying The efforts of Ms Barbara Allen in preparing this volume bear special note *Cell Biology of*

Extracellular Matrix Elizabeth D. Hay, 2012-12-06 At a recent meeting to discuss the domains of cell biology I put forth a case for the extracellular matrix even though my argument ran the risk of falling on deaf ears After all the matrix is EXTRAcellular outside the cells In this book however the authors make a compelling case for the relevance of the matrix to cellular concerns Not only are numerous cell types including many epithelia quite caught up in the business of manufacturing matrix

components but also most of them contain matrix molecules in exoskeletons that are attached to the plasmalemma and that organize or otherwise influence the affairs of the cytoplasm. The idea of this book is to present the extracellular matrix to cell biologists of all levels. The authors are active and busy investigators, recognized experts in their fields, but all were enthusiastic about the prospect of writing for this audience. The chapters are not review articles in the usual sense, nor are they rehashes of symposium talks; they were written specifically for this book and they present the state of the art in an engaging style with ample references to more technical or historical reviews. The book is rich in electron micrographs and diagrams, and for many of the latter as well as for the design of the cover, we are indebted to Sylvia J. Keene, medical illustrator for the Department of Anatomy at Harvard Medical School. We also owe special thanks to Susan G. **Current Catalog** National Library of Medicine (U.S.), First multi-year cumulation covers six years 1965-70. Respiratory Control and Lung Development in the Fetus and Newborn Barbara M. Johnston, Peter D. Gluckman, 1986. Proteinases and Tumor Invasion Peter Sträuli, Alan J. Barrett, Antonio Baici, 1980. **Progress in Heritable Soft Connective Tissue Diseases** Jaroslava Halper, 2021-11-22. This volume represents a substantially revised and updated 2nd edition of a reference handbook on major structural components of soft connective tissues and a whole slew of heritable diseases of soft connective tissues. The number of clearly identifiable and distinct disorders has grown somewhat since the 1st edition in 2014: e.g., Ehlers-Danlos syndrome has now 13 entities. A brand new syndrome, Meester-Loeys syndrome, carrying the name of Bart Loeys, was added as a companion to Loeys-Dietz syndrome. Numerous variations of cutis laxa and joint mobility disorders have been discovered, taking advantage of recent advancements in genetic analysis. We have acquired better understanding of pathogenesis and biochemical changes in some other more established entities such as Marfan and collagen VI myopathies, where better management and possible treatment are on the horizon. Even in the case of connective tissue diseases in domestic animals, some progress has been made. All these updates were contributed by a group of distinguished and preeminent physicians and scientists, all of them not just working in the field but making new discoveries described by them. Readers will notice that seemingly there is an overlap among many of these disorders, and indeed many of them, if not most, are interconnected because of the prominent roles of TGF- β , fibrillin, microfibrils, and collagen fibril assembly, and other molecules playing in connective tissue physiology and by extension in pathogenesis of many disorders described in the book. What I found particularly helpful: that authors of each chapter bring their own perspective, even when describing closely related mechanisms of the disease. These observations should help with diagnosis and management of such cases. The first chapters are more general, concentrating more on the physiology, structure, and biochemistry of normal soft tissues. That should help in better understanding of the pathophysiology. Last but not least, the chapters are very readable, more like detective stories than dry descriptions of genetic/biochemical defects. I do hope that basic scientists and clinicians with similar and diverse interests alike will appreciate this volume and will be inspired by it to develop their research in the field. *Federation*
