Performance evaluation of channel estimation techniques for LTE downlink system Kahsay Meresa,2016-12-03 In this thesis channel estimation techniques for LTE downlink named Least Square Minimum Mean Square error and Maximum Likelihood estimation techniques are studied for the pilot symbol based channel estimation In addition to this the performances of these three channel estimation techniques were also studied by introducing averaging interpolation and

hybrid methods This work also investigates the complexity of the channel estimation techniques in terms of the number of complex multiplications and by varying the FFT size and number of CP cyclic prefix furthermore the effect of varying the number of antennas at the transmitter and receiver ends where 2×2 and 4×4 antenna arrangements are considered as a case studies The performance of these channel estimation techniques is also studied for EVA standard channel model in LTE The considered channel model is EVA standard channel model with Doppler shift of 300HZ

Performance evaluation of channel estimation techniques for an LTE downlink system Kahsay Kiross, 2016-12-19 Thesis M A from the year 2016 in the subject Engineering Communication Technology grade 75% Mekelle University course Communication engineering language English abstract In this thesis channel estimation techniques for LTE downlink named Least Square Minimum Mean Square error and Maximum Likelihood estimation techniques are studied for the pilot symbol based channel estimation In addition to this the performances of these three channel estimation techniques were also studied by introducing averaging interpolation and hybrid methods This work also investigates the complexity of the channel estimation techniques in terms of the number of complex multiplications and by varying the FFT size and number of CP furthermore the effect of varying the number of antennas at the transmitter and receiver ends where 2×2 and 4×4 antenna arrangements are considered as a case studies The performance of these channel estimation techniques is also studied for EVA standard channel model in LTE The considered channel model is EVA standard channel model with Doppler shift of 300HZ Simulation results in this thesis show that the ML channel estimation technique has the best performance In terms of number of complex multiplications it is proved the ML has lower complexity From the interpolating techniques it is shown the performance of the algorithm integrated with hybrid technique has the best performance In addition to this it is shown that as the number of transmit and receive antennas increase from 2×2 to 4×4 the performance of the estimator increases
