Event Based Control And Signal Processing Embedded Systems:

Event-Based Control and Signal Processing Marek Miskowicz, 2018-09-03 Event based systems are a class of reactive systems deployed in a wide spectrum of engineering disciplines including control communication signal processing and electronic instrumentation Activities in event based systems are triggered in response to events usually representing a significant change of the state of controlled or monitored physical variables Event based systems adopt a model of calls for resources only if it is necessary and therefore they are characterized by efficient utilization of communication bandwidth computation capability and energy budget Currently the economical use of constrained technical resources is a critical issue in various application domains because many systems become increasingly networked wireless and spatially distributed Event Based Control and Signal Processing examines the event based paradigm in control communication and signal processing with a focus on implementation in networked sensor and control systems Featuring 23 chapters contributed by more than 60 leading researchers from around the world this book covers Methods of analysis and design of event based control and signal processing Event driven control and optimization of hybrid systems Decentralized event triggered control Periodic event triggered control Model based event triggered control and event triggered generalized predictive control Event based intermittent control in man and machine Event based PID controllers Event based state estimation Self triggered and team triggered control Event triggered and time triggered real time architectures for embedded systems Event based continuous time signal acquisition and DSP Statistical event based signal processing in distributed detection and estimation Asynchronous spike event coding technique with address event representation Event based processing of non stationary signals Event based digital FIR and IIR filters Event based local bandwidth estimation and signal reconstruction Event Based Control and Signal Processing is the first extensive study on both event based control and event based signal processing presenting scientific contributions at the cutting edge of modern science and engineering **Advanced**
