Global Production Pol Antràs, 2015-12-22 *Global Production* is the first book to provide a fully comprehensive overview of the complicated issues facing multinational companies and their global sourcing strategies. Few international trade transactions today are based on the exchange of finished goods; rather, the majority of transactions are dominated by sales of individual components and intermediary services. Many firms organize global production around offshoring parts, components, and services to producers in distant countries, and contracts are drawn up specific to the parties and distinct legal systems involved. Pol Antràs examines the contractual frictions that arise in the international system of production and how these frictions influence the world economy. Antràs discusses the inevitable complications that develop in contract negotiation and execution. He provides a unified framework that sheds light on the factors helping global firms determine production locations and other organizational choices. Antràs also implements a series of systematic empirical tests based on recent data from the U.S. Customs and Census Offices, which demonstrate the relevance of contractual factors in global production decisions. Using an integrated approach, *Global Production* is an excellent resource for researchers, graduate students, and advanced undergraduates interested in the inner workings of international economics and trade.

Technology Differences over

Space and Time Francesco Caselli, 2016-11-22 Technology Differences over Space and Time looks at how countries use their productive resources such as workers skills equipment and structures and natural resources Francesco Caselli develops methods to assess the efficiency with which productive inputs are used and how these efficiencies vary across countries and over time Caselli finds that richer countries use skilled workers relatively more efficiently than unskilled workers and equipment and structures relatively more efficiently than natural resources They also are relatively more efficient users of labor than of capital Technological change tends to make countries particularly efficient at using skills and less efficient at using capital Technical change also favors experienced workers In order to interpret and understand these findings Caselli presents a theory of technology choice In this theory firms pick technologies that make the most efficient use of the most abundant production factors when these factors are good substitutes for the less abundant factors Firms pick technologies that make the most of less abundant factors when other suitable factors are not available for substitution For example rich countries where skilled workers are abundant use skilled workers efficiently as these are good substitutes for unskilled workers This flexible framework can be applied to other pairs of inputs over time and across countries Technology Differences over Space and Time has significant implications not only for the theoretical understanding of development and technological innovation but also for government formulation of industrial policy and multinationals making decisions about what to invest in and where to make those investments Catalogue Kansas State Agricultural College, Kansas State College of Agriculture and Applied Science, Kansas State University, 1971 **World Agricultural Economics and Rural Sociology Abstracts**, 1991 *All Off-campus Courses, On-campus Saturday and Evening Courses* Iowa State University, 1999 Catalogs of Courses University of California, Berkeley, 1993 Includes general and summer catalogs issued between 1878 1879 and 1995 1997 **Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic Awards**, 2008 **Stanford Bulletin**, 2001 Business Books and Serials in Print, 1977 Paperbound Books in Print, 1970 **International Books in Print**, 1986 **Annual Index**, 2006 **The Macroeconomics of Trade Credit** Luigi Bocola, 2023 In most countries suppliers of intermediate goods and services are also the main providers of short term financing to firms This paper studies the macroeconomic implications of these financial links In our model trade credit is the outcome of a long term contract between firms linked in the production process and it is sustained in equilibrium by reputation forces as customers lose the relationship with their suppliers in case of a default These financial links give rise to a credit multiplier suppliers can enforce repayment of these IOUs and they can discount these bills with banks to obtain liquidity This process can either dampen or amplify the output effects of financial shocks depending on the borrowing capacity of suppliers Using Italian data we find that the credit multiplier is sizable and show that trade credit amplified the output costs of the Great Recession by 45%
