Global Climate Change And Tropical Ecosystems Advances In Soil Science:

Global Climate Change and Tropical Ecosystems John M. Kimble, Bobby A. Stewart, 1999-12-20 Tropical ecosystems the regions between the tropics of Cancer and Capricorn play an important role in global processes economic issues and political concerns In their natural state tropical ecosystems support a large quantity of above and below ground biomass and constitute a major part of the terrestrial carbon pool Conversion of the natural ecosystem to agriculture and forestry ecosystems disturbs this ecological balance Global Climate Change and Tropical Ecosystems presents data on carbon pool fluxes from case studies in 12 countries in tropical regions The chapters cover Characteristics of tropical ecosystems Soil and biotic carbon pools Impacts of land use and soil management Slash and burn practices Crop residue and fertility management This volume adds to the understanding of pedospheric processes in tropical ecosystems and how to better use soils as a sink for carbon dioxide and other greenhouse gases With Global Climate Change and Tropical Ecosystems you will understand the link between soil productivity environmental quality and the global carbon cycle not only in these ecologically sensitive regions but worldwide

Soil Carbon Dynamics Werner L. Kutsch, Michael Bahn, Andreas Heinemeyer, 2010-01-07 Carbon stored in soils represents the largest terrestrial carbon pool and factors affecting this will be vital in the understanding of future atmospheric CO₂ concentrations This book provides an integrated view on measuring and modeling soil carbon dynamics Based on a broad range of in depth contributions by leading scientists it gives an overview of current research concepts developments and outlooks and introduces cutting edge methodologies ranging from questions of appropriate measurement design to the potential application of stable isotopes and molecular tools It includes a standardised soil CO₂ efflux protocol aimed at data consistency and inter site comparability and thus underpins a regional and global understanding of soil carbon dynamics This book provides an important reference work for students and scientists interested in many aspects of soil ecology and biogeochemical cycles policy makers carbon traders and others concerned with the global carbon cycle

World Agroforestry Into the Future Dennis P. Garrity, 2006 Agricultural Practices and Policies for Carbon Sequestration in Soil John M. Kimble, Rattan Lal, Ronald F. Follett, 2016-04-19 The potential to mitigate greenhouse gas emissions and global climate change is one factor driving agricultural policy development of programs that might pay farmers for practices with a high potential to sequester carbon With chapters by economists policy makers farmers land managers energy company representatives and soil scientists Agricu

Costa Rican Ecosystems Maarten Kappelle, 2016-04-15 In the more than thirty years since the publication of Daniel H Janzen's classic Costa Rican Natural History research in this small but astonishingly biodiverse well preserved and well studied Latin American nation has evolved from a species level approach to the study of entire ecosystems And from the lowland dry forests of Guanacaste to the montane cloud forests of Monteverde from the seasonal forests of the Central Valley to the coastal species assemblages of Tortuguero Costa Rica has proven to be as richly diverse in ecosystems as it is in species In Costa Rican Ecosystems Maarten

Kappelle brings together a collection of the world's foremost experts on Costa Rican ecology outstanding scientists such as Daniel H Janzen Jorge Cortés Jorge A Jimenez Sally P Horn Robert O Lawton Quirico Jimenez M Carlos Manuel Rodríguez Catherine M Pringle and Eduardo Carrillo J among others to offer the first comprehensive account of the diversity structure function uses and conservation of Costa Rica's ecosystems Featuring a foreword and introductory remarks by two renowned leaders in biodiversity science and ecological conservation Thomas E Lovejoy and Rodrigo Gómez Lobo in addition to chapters highlighting the geology soils and climate of Costa Rica as well as the ecosystems of its terrestrial freshwater and marine habitats and including previously unpublished information on Isla del Coco this beautiful color illustrated book will be an essential reference for academic scientists students natural history guides conservationists educators park guards and visitors alike

Biodiversity and Conservation: Causes and consequences of biodiversity loss 2 : pollution, climate change and unsustainable exploitation

Richard J. Ladle, 2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word s first appearance in the language in the mid 1980s In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies It is increasingly taught and studied in universities and other research institutions around the world Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University s Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates
