A Genealogical History of the Dormant, Abeyant, Forfeited, and Extinct Peerages of the British Empire Bernard Burke, 1883

Vanished Sadiya Qureshi, 2025-06-05 A vital and important book David Olusoga From an award winning historian of race science and empire a path breaking and poignant history of extinction as a scientific idea an imperial legacy and a political choice Anyone alive today is among a tiny fraction of the once living over 90% of species that ever existed are now extinct How did we come to think of ourselves as survivors in a world where species can vanish forever or as capable of pushing our planet to the verge of a sixth mass extinction Extinction Sadiya Qureshi shows us is a surprisingly modern concept and a phenomenon that is not as natural as we might think In Europe until the late eighteenth century species were considered perfect and unchanging creations of God Then in the age of revolutions scientists gathered enough fossil evidence to determine that mammoth bones for example were not just large elephants but a lost species that once roamed the Earth alongside ancient humans Extinction went from being regarded as theologically dangerous to pervasive and even inevitable Yet Vanished shows us that extinction is more than a scientific idea it is a political choice that has led to devastating consequences Europeans and Americans quickly used the notion that extinction was a natural process to justify persecution and genocide predicting that nations from Newfoundland's Beothuk to Aboriginal Australians were doomed to die out from imperial expansion Exploring the tangled and unnatural histories of extinction and empire Vanished weaves together pioneering original research and breath taking storytelling to show us extinction is both an evolutionary process and a human act one which illuminates our past and may alter our future

Evolutionary History Edmund Russell, 2011-04-11 We tend to see history and evolution springing from separate roots one grounded in the human world and the other in the natural world Human beings have however become probably the most powerful species shaping evolution today and human caused evolution in other species has probably been the most important force shaping human history This book introduces readers to evolutionary history a new field that unites history and biology to create a fuller understanding of the past than either can produce on its own Evolutionary history can stimulate surprising new hypotheses for any field of history and evolutionary biology How many art historians would have guessed that sculpture encouraged the evolution of tuskless elephants How many biologists would have predicted that human poverty would accelerate animal evolution How

many military historians would have suspected that plant evolution would convert a counter insurgency strategy into a rebel subsidy With examples from around the globe this book will help readers see the broadest patterns of history and the details of their own life in a new light Brief Biography and Popular Account of the Unparalleled Discoveries of T. g  ologique de France, Centre national de la recherche scientifique (France), 1987 Geological History of Britain and Ireland Nigel H. Woodcock, R. A. Strachan, 2012-05-21 Britain and Ireland have a remarkably varied geology for so small a fragment of continental crust with a fine rock record back through three billion years of geological time This history would have been interesting enough if it had been played out on relatively stable continental crust However Britain and Ireland have developed at a tectonic crossroads on crust once traversed by subduction zones and volcanic arcs continental rifts and mountain belts The resulting complexity is instructive fascinating and perplexing Geological History of Britain and Ireland tells the region's story at a level accessible to undergraduate geologists as well as to postgraduates professionals or informed amateurs This second edition is fully revised and updated reflecting our continually developing knowledge of the region's geology Full coverage is again given to the rich Precambrian and Early Palaeozoic history as well as to later events more relevant to hydrocarbon exploration The book is an essential starting point for more detailed studies of the regional geology Additional resources for this book can be found at <http://www.wiley.com/go/woodcock/geologicalhistory> East Galloway sketches: or Biographical, historical, and descriptive notices of Kircudbrightshire, chiefly in the nineteenth century Alexander Trotter, 1901 *History of the Indian Tribes of North America, with Biographical Sketches and Anecdotes of the Principal Chiefs. Taylor, 2004-11-11 Extinction is the ultimate fate of all biological species over 99 percent of the species that have ever inhabited the Earth are now extinct The long fossil record of life provides scientists with crucial information about when species became extinct which species were most vulnerable to extinction and what processes may have brought about extinctions in the geological past Key aspects of extinctions in the history of life are here reviewed by six leading palaeontologists providing a source text for geology and biology undergraduates as well as more advanced scholars Topical issues such as the causes of mass extinctions and how animal and plant life has recovered from these cataclysmic events that have shaped biological evolution are dealt with This helps us to view the biodiversity crisis in a broader context and shows how large scale extinctions have had profound and long lasting effects on the Earth's biosphere
