evaluated Dealing with Contaminated Sites Frank A. Swartjes, 2011-01-12 This standard work on contaminated site management covers the whole chain of steps involved in dealing with contaminated sites from site investigation to remediation. An important focus throughout the book is on Risk Assessment. In addition, the book includes chapters on characterisation of natural and urban soils, bioavailability, natural attenuation, policy and stakeholder viewpoints, and Brownfields. Typically, the book includes in depth theories on soil contamination along with offering possibilities for practical applications. More than sixty of the world's top experts from Europe, the USA, Australia, and Canada have contributed to this book. The twenty-five chapters in this book offer relevant information for experienced scientists, students, consultants, and regulators, as well as for new players in contaminated site management.

Fish Physiology: Organic Chemical Toxicology of Fishes Keith B. Tierney, Anthony Farrell, Colin Brauner, 2013-12-04 *Fish Physiology: Organic Chemical Toxicology of Fishes* discusses the different types of organic chemical contaminants and their respective toxic effects in fish. The book also covers the detection of dissolved organic compounds and methods to assess organic toxicity. Substances addressed in this book include organometallics, hydrocarbons, endocrine disrupting compounds, EDCs, insecticides, herbicides, and pharmaceuticals. Fish are exposed to an ever-increasing array of organic chemicals that find their way into rivers and oceans. Some of these compounds are no longer being produced but nonetheless persist within the environment as persistent organic pollutants or POPs. The exposure of fish to toxic organic compounds has potential impact on human, fish, and ecosystem health. Yet the regulations that govern environmental water quality vary worldwide and compliance is never complete. This book provides a crucial resource on these issues for researchers in zoology, fish physiology, and related fields, applied researchers in environmental monitoring, conservation biology, and toxicology, and university-level students and instructors in these areas. Organized by type of toxic organic chemical, it includes metals, POPs, EDCs, herbicides, insecticides, and pharmaceuticals. Measures toxicity in a variety of ways, aside from lethality. Probes the toxic effects of compound mixtures as well as single pollutants.

Ecological Impacts of Toxic Chemicals Francisco Sánchez-Bayo, Paul J. van den Brink, Reinier M. Mann, 2011 *Ecological Impacts of Toxic Chemicals* presents a comprehensive yet readable account of the known disturbances caused by all kinds of toxic chemicals on both aquatic and terrestrial ecosystems. Topics cover the sources of toxicants, their fate and distribution through the planet, their impacts on specific ecosystems, and their remediation by natural systems. Each chapter is written by well-known specialists in those areas for the general public, students, and even scientists from outside this field. The book intends to raise awareness of the dangers of chemical pollution in a world dominated by industry and globalization of resources. Because the problems are widespread and far-reaching, it is hoped that confronting the facts may prompt better management practices at industrial, agricultural, and all levels of management, from local to governmental, so as to reduce the negative impacts of chemical contaminants on our planet.
