sector Presenting a uniquely accessible guide Extreme Events in Finance A Handbook of Extreme Value Theory and Its Applications features a combination of the theory methods and applications of extreme value theory EVT in finance and a practical understanding of market behavior including both ordinary and extraordinary conditions Beginning with a fascinating history of EVTs and financial modeling the handbook introduces the historical implications that resulted in the applications and then clearly examines the fundamental results of EVT in finance After dealing with these theoretical results the handbook focuses on the EVT methods critical for data analysis Finally the handbook features the practical applications and techniques and how these can be implemented in financial markets Extreme Events in Finance A Handbook of Extreme Value Theory and Its Applications includes Over 40 contributions from international experts in the areas of finance statistics economics business insurance and risk management Topical discussions on univariate and multivariate case extremes as well as regulation in financial markets Extensive references in order to provide readers with resources for further study Discussions on using R packages to compute the value of risk and related quantities The book is a valuable reference for practitioners in financial markets such as financial institutions investment funds and corporate treasuries financial engineers quantitative analysts regulators risk managers large scale consultancy groups and insurers Extreme Events in Finance A Handbook of Extreme Value Theory and Its Applications is also a useful textbook for postgraduate courses on the methodology of EVTs in finance

**Flood Risk Assessment and Management** Andreas H. Schumann, 2011-01-04 Flood catastrophes which happened world wide have shown that it is not sufficient to characterize the hazard caused by the natural phenomenon flood with the well known 3M approach measuring mapping and modelling Due to the recent shift in paradigms from a safety oriented approach to risk based planning it became necessary to consider the harmful impacts of hazards The planning tasks changed from attempts to minimise hazards towards interventions to reduce exposure or susceptibility and nowadays to enhance the capacities to increase resilience Scientific interest shifts more and more towards interdisciplinary approaches which are needed to avoid disaster This book deals with many aspects of flood risk management in a comprehensive way As risks depend on hazard and vulnerabilities not only geophysical tools for flood forecasting and planning are presented but also socio economic problems of flood management are discussed Starting with precipitation and meteorological tools to its forecasting hydrological models are described in their applications for operational flood forecasts considering model uncertainties and their interactions with hydraulic and groundwater models With regard to flood risk planning regionalization aspects and the options to utilize historic floods are discussed New hydrological tools for flood risk assessments for dams and reservoirs are presented Problems and options to quantify socio economic risks and how to consider them in multi criteria assessments of flood risk planning are discussed This book contributes to the contemporary efforts to reduce flood risk at the European scale Using many real world examples it is useful for scientists and practitioners at different levels and with different interests
