Clifford Algebra to Geometric Calculus David Hestenes, Garret Sobczyk, 1984 Matrix algebra has been called the arithmetic of higher mathematics. We think the basis for a better arithmetic has long been available but its versatility has hardly been appreciated and it has not yet been integrated into the mainstream of mathematics. We refer to the system commonly called Clifford Algebra though we prefer the name Geometric Algebra suggested by Clifford himself. Many distinct algebraic systems have been adapted or developed to express geometric relations and describe geometric structures. Especially notable are those algebras which have been used for this purpose in physics in particular the system of complex numbers, the quaternions, matrix algebra, vector tensor and spinor algebras and the algebra of differential forms. Each of these geometric algebras has some significant advantage over the others in certain applications so no one of them provides an adequate algebraic structure for all purposes of geometry and physics. At the same time the algebras overlap considerably so they provide several different mathematical representations for individual geometrical or physical ideas. **ALL+ 2024**
