The *Handbook for Blast Resistant Design of Buildings* features contributions from some of the most knowledgeable and experienced consultants and researchers in blast resistant design. This handbook is organized into four parts. Part 1 Design Considerations sets forth basic principles examining general considerations in the design process, risk analysis and reduction criteria for acceptable performance, materials performance under the extraordinary blast environment and performance verification for technologies and solution methodologies. Part 2 Blast Phenomena and Loading describes the explosion environment, loading functions needed for blast response analysis and fragmentation and associated methods for effects analysis. Part 3 System Analysis and Design explains the analysis and design considerations for structural building envelope, component, space, site, perimeter and building system designs. Part 4 Blast Resistant Detailing addresses the use of concrete, steel and masonry in new designs as well as retrofitting existing structures.
