Mountain Building

What Do Converging Plates Create?

- **Converging** plates create mountain ranges through three combinations of plate types—continent-continent, continent-ocean, and ocean-ocean.
- The converging plates smash together and upward to create mountain ranges, and stress from these **uplifts** causes folds, reverse faults, and thrust faults.
- **Subduction** of oceanic lithosphere at convergent plate boundaries also builds mountain ranges on continental crusts.

Study Tip

Diverging sounds like dividing, which means to separate, so diverging plates separate from each other.

How Does Divergence Create Mountains?

- **Divergence**, or the plates spreading apart, can also create mountain ranges.
- Alternating mountains and valleys are created when tensional stresses pull the crust apart, breaking it into blocks that slide along faults. These are known as basin-and-range, where the uplifted blocks, or ranges, are known as horsts and the basins are called grabens.

Concept Check

- Make sure you know the difference between convergence and divergence.
- Be able to define uplift.
