Encyclopedia of Global Environmental Governance and Politics Philipp H. Pattberg, Fariborz Zelli, 2015-11-27 The Encyclopedia of Global Environmental Governance and Politics surveys the broad range of environmental and sustainability challenges in the emerging Anthropocene and scrutinizes available concepts, methodological tools, theories, and approaches as well as overlaps with adjunct fields of study. This comprehensive reference work, written by some of the most eminent academics in the field, contains 68 entries on numerous aspects across 7 thematic areas, including concepts and definitions, theories and methods, actors, institutions, issue areas, cross-cutting questions, and overlaps with non-environmental fields. With this broad approach, the volume seeks to provide a pluralistic knowledge base of the research and practice of global environmental governance and politics in times of increased complexity and contestation. Providing its readers with a unique point of reference as well as stimulus for further research, this Encyclopedia is an indispensable tool for anyone interested in the politics of the environment, particularly students, teachers, and researchers.

The Oxford Handbook of International Political Theory Chris Brown, Robyn Eckersley, 2018-02-22 International Political Theory (IPT) focuses on the point where two fields of study meet: International Relations and Political Theory. It takes from the former a central concern with the international, broadly defined, and from the latter it takes a broadly normative identity. IPT studies the ought questions that have been ignored or sidelined by the modern study of International Relations and the international dimension that Political Theory has in the past neglected. A central proposition of IPT is that the domestic and the international cannot be treated as self-contained spheres, although this does not preclude states and the states system from being regarded by some practitioners of IPT as central points of reference. This Handbook provides an authoritative account of the issues, debates, and perspectives in the field, guided by two basic questions concerning its purposes and methods of inquiry: First, how does IPT connect with real-world politics? In particular, how does it engage with real-world problems and position itself in relation to the practices of real-world politics? And second, following on from this, what is the relationship between IPT and empirical research in international relations? This Handbook showcases the distinctive and valuable contribution of normative inquiry, not just for its own sake but also in addressing real-world problems. The Oxford Handbooks of International Relations is a twelve-volume set of reference books offering authoritative and innovative engagements with the principal sub-fields of International Relations. The series as a whole is under the General Editorship of Christian Reus-Smit of the University of Queensland and Duncan Snidal of the University of Oxford, with each volume edited by a distinguished pair of specialists in their respective fields. The series both surveys the broad terrain of International Relations scholarship and reshapes it, pushing each sub-field in challenging new directions. Following the example of the original Reus-Smit and Snidal, The Oxford Handbook of International Relations, each volume is organized around a strong central thematic by a pair of scholars drawn from alternative perspectives, reading its sub-field in an entirely new way and pushing scholarship in challenging new directions.

Trajectories in Environmental Politics Graeme Hayes, Sikina Jinnah, Prakash Kashwan, David M. Konisky, Sherilyn Macgregor, John M. Meyer, Anthony R. Zito, 2022-03-30 This book explores the dominant framings and paradigms of environmental politics the relationship between academic analysis and environmental politics and reflects on the first thirty years of the journal Environmental Politics The book has two purposes The first is to identify and discuss the key themes that have driven scholarship in the field of environmental politics over the last three decades and to highlight how this has also led to oversights and silences and the marginalisation of important forms of analysis and thought As several chapters in the book explore problem solving frameworks have increasingly taken away space from more radical systemic challenge and critique as the key themes of environmental politics

have become ever more central to the field of politics as a whole and as our understandings of social and environmental crisis become ever clearer and more urgent The second purpose of the volume is to map out a series of new and developing agendas for environmental politics The chapters in this volume focus foremost on questions of justice materiality and power Discussing state violence multispecies justice epistemic injustice the circular economy NGOs parties green transition and urban climate governance they call above all for greater attention to intersectionality and interdisciplinarity and for centering key insights about power relations and socio economic inequalities into increasingly widespread yet also often depoliticised topics in the study of environmental politics The chapters in this book were originally published as a special issue of *Environmental Politics* *New Earth Politics* Simon Nicholson, Sikina Jinnah, 2016-03-04 Prominent scholars and practitioners in the field of global environmental politics consider the ecological and political realities of life on the new earth and probe the field's deepest and most enduring questions at a time of increasing environmental stress Arranged in complementary pairs included are reflections on environmental pedagogy analysis of new geopolitical realities reflections on the power of social movements and international institutions and calls for more compelling narratives to promote environmental action

Environmental Politics and Governance in the Anthropocene Philipp Pattberg, Fariborz Zelli, 2016-01-13 The term Anthropocene denotes a new geological epoch characterized by the unprecedented impact of human activities on the Earth's ecosystems While the natural sciences have advanced their understanding of the drivers and processes of global change considerably over the last two decades the social sciences lag behind in addressing the fundamental challenge of governance and politics in the Anthropocene This book attempts to close this crucial research gap in particular with regards to the following three overarching research themes i the meaning sense making and contestations emerging around the concept of the Anthropocene related to the social sciences ii the role and relevance of institutions both formal and informal as well as international and transnational for governing in the Anthropocene and iii the role and relevance of accountability and other democratic principles for governing in the Anthropocene Drawing together a range of key thinkers in the field this volume provides one of the first authoritative assessments of global environmental politics and governance in the Anthropocene reflecting on how the planetary scale crisis changes the ways in which humans respond to the challenge This volume will be of great interest to students and scholars of global environmental politics and governance and sustainable development

Global Environmental Governance Reconsidered Frank Biermann, Philipp Pattberg, 2012-07-06 An examination of three major trends in global governance exemplified by developments in transnational environmental rule setting The notion of global governance is widely studied in academia and increasingly relevant to politics and policy making Yet many of its fundamental elements remain unclear in both theory and practice This book offers a fresh perspective by analyzing global governance in terms of three major trends as exemplified by developments in global sustainability governance the emergence of nonstate actors new mechanisms of transnational

cooperation and increasingly segmented and overlapping layers of authority The book which is the synthesis of a ten year Global Governance Project carried out by thirteen leading European research institutions first examines new nonstate actors focusing on international bureaucracies global corporations and transnational networks of scientists then investigates novel mechanisms of global governance particularly transnational environmental regimes public private partnerships and market based arrangements and finally looks at fragmentation of authority both vertically among supranational international national and subnational layers and horizontally among different parallel rule making systems The implications potential and realities of global environmental governance are defining questions for our generation This book distills key insights from the past and outlines the most important research challenges for the future **Global Change Newsletter** ,2015 A study of global change IGBP *What Next for Sustainable Development?* James Meadowcroft,David Banister,Erling Holden,Oluf Langhelle,Kristin Linnerud,Geoffrey Gilpin,2019 This book examines the international experience with sustainable development since the concept was brought to world wide attention in Our Common Future the 1987 report of the World Commission on Environment and Development Scholars from a variety of disciplinary backgrounds engage with three critical themes negotiating environmental limits equity environment and development and transitions and transformations In light of the 2030 Sustainable Development Goals recently adopted by the United Nations General Assembly they ask what lies ahead for sustainable development Publisher s website [Governance of Earth Systems](#) Robert Boardman,2010-07-07 Science and politics are closely connected in today s global environmental issues This book focuses on these links in relation to climate change the threats to wildlife species and natural hazards and disasters Close study of these links of these reveals the need for more effective international cooperation and the limits of global governance *Governing Complex Systems* Oran R. Young,2017-03-10 An exploration of the need for innovative mechanisms of governance in an era when human actions are major drivers of environmental change The onset of the Anthropocene an era in which human actions have become major drivers of change on a planetary scale has increased the complexity of socioecological systems Complex systems pose novel challenges for governance because of their high levels of connectivity nonlinear dynamics directional patterns of change and emergent properties Meeting these challenges will require the development of new intellectual capital In this book Oran Young argues that to achieve sustainable outcomes in a world of complex systems we will need governance systems that are simultaneously durable enough to be effective in guiding behavior and agile enough to adapt to rapidly changing circumstances While some insights from past research on governance remain valid in this setting Young argues that we need new social capital to supplement mainstream regulatory approaches that feature rule making with an emphasis on compliance and enforcement He explores the uses of goal setting as a governance strategy the idea of principled governance and the role of what is often called good governance in meeting the challenges of the Anthropocene Drawing on his long experience operating on the science policy frontier Young calls for more effective collaboration between analysts and

practitioners in creating and implementing governance systems capable of producing sustainable outcomes in a world of complex systems **Managers of Global Change** Frank Biermann, Bernd Siebenhüner, 2009 An examination of the role and relevance of international bureaucracies in global environmental governance **Estudos avançados** ,2014 *World Social Science Report* ,2013
