Moritz, 1981 **Obesity Prevention** Laurette Dube, 2010-06-25 Over the years approaches to obesity prevention and treatment have gone from focusing on genetic and other biological factors to exploring a diversity of diets and individual behavior modification interventions anchored primarily in the power of the mind to the recent shift focusing on societal interventions to design temptation proof physical social and economic environments In spite of repeated calls to action including those of the World Health Organization WHO the pandemic continues to progress WHO recently projected that if the current lifestyle trend in young and adult populations around the world persist by 2012 in countries like the USA health care costs may amount to as much as 17.7% of the GDP Most importantly in large part due to the problems of obesity those children may be the first generation ever to have a shorter life expectancy than that of their parents Obesity Prevention presents the most current research and proposals for addressing the pandemic Past studies have focused primarily on either genetic or behavioral causes for obesity however today's research indicates that a strongly integrated program is the best prospect for success in overcoming obesity Furthermore focus on the role of society in establishing an affordable accessible and sustainable program for implementing these lifestyle changes is vital particularly for those in economically challenged situations who are ultimately at the highest risk for obesity Using studies from both neuroscience and behavioral science to present a comprehensive overview of the challenges and possible solutions The brain to society approach to obesity prevention focuses on what is needed in order to sustain a healthy pleasurable and affordable lifestyle Explores the brain to society approach to obesity prevention focusing on an integrative approach to addressing the obesity pandemic Presents both the neuroscientific and the behavioral factors that impact eating habits Identifies the challenges and suggests solutions for altering attitudes toward food on both an individual and a societal level **Eating Behavior and Food Decision Making in Children and Adolescents** Oh-Ryeong Ha, Seung-Lark Lim, Amanda Schurle Bruce, Travis D. controversies associated with the construct. It reviews both the clinical and neuroscientific evidence that some individuals eating behavior mirrors that seen in substance use disorders (SUD) such as how their relationship with food appears to be addictive. Chapters also discuss how many of the mechanisms known to underlie SUDs appear to drive overeating in animal models and humans. Food, Nutrition and Eating Behavior Joav Merrick, Sigal Israeli, 2014. Eating habits are influenced by social, cultural, religious, economic, environmental and individual factors. On the whole, people eat to stay alive and get their nutrition, but they also eat to show belonging to family or other social groups. Eating habits are linked to acceptable patterns of behaviour which differs across countries, cultures and ethnic or religious groups. The food you eat affects your health and also puts you at risk for certain diseases. To eat healthier food, people may need to change some habits and also their environment. But in the Western world, habits are hard to change and in many countries there is a reputation for reckless eating. People fill their cups with fatty, sugary, high calorie foods instead of more nutritious fruits and vegetables that the experts tell us to eat. The result is an increase in obesity, heart disease and higher mortality. Our eating habits also change over time and across generations. What we liked as kids are not the same we like as adults and what we eat is not what the generation before us ate. In this book, you will find examples of the younger generation who are snacking, not always healthy food. Chocolate bars and biscuits between or instead of regular meals can lead to obesity and health problems. As a person grows up and becomes more aware of the health hazards, they also become more concerned with nutrition and health issues, especially if they experience health problems that eventually will make them change their eating habits. Healthy eating is not about strict nutrition rules but finding a way to get the right nutrition in your food and meals, stay away from unhealthy habits and keep yourself as healthy as possible.
