

3. Loosen and remove two (2) fasteners attaching control panel cover to counterweight. Remove panel cover.

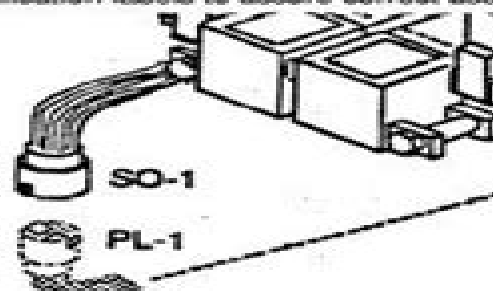

This will expose control panel compartment which is mounted on rear wall of battery box.

The SCR panel and contactor panel are considered an assembly and are removed as a unit.

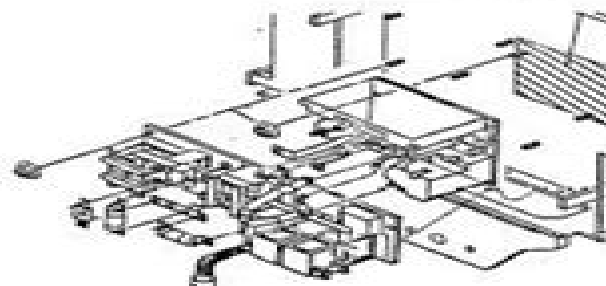

4. Discharge capacitor by using an insulated screwdriver or similar device to short across terminals of capacitor.

5. Remove power cables from control assembly (make sure terminals of all cables have identification labels to assure correct assembly).

Separate two wire harness sections by disconnecting the quick-disconnect plugs (press in prongs on each side of plug to release and then pull apart).

6. Loosen and remove six (6) fasteners attaching control panel to battery box. Support panel as fasteners are removed and lift control off truck.

The SCR panel has a thermal conducting material applied to its undersurface and care should be used when handling control to avoid contaminating other items when storing panel.

19-08-05 CONTROL PANEL DISASSEMBLY

1. Put control assembly on a clean work surface with contactor panel nearest technician and SCR panel away from technician. (Directions will be noted with this orientation of panel, ie. right, left, front, rear, etc.).

Note that two panels are joined only by bus bars and harness. To separate panels, remove bus bars and harness.

2. Note position of all wires on panel, placement of all components, and locations of all mounting fasteners.

3. Make sure capacitor is discharged.

4. **PUMP CONTACTOR REMOVAL.** Remove fasteners attaching angled and straight bus bars between contactor (located on right rear corner of contactor) and angled bus bar leading to 500 amp main pump fuse and remove these two bus bar segments.

5. Remove three (3) control wires (#13A-1 and #13A) from upper rear RH terminal of contactor coil and control wire (#26) from LH rear terminal.

6. Remove 2 fasteners attaching contactor to panel base plate and remove contactor.
