Ecosystem-Based Management for the Oceans Karen McLeod, Heather Leslie, 2012-09-26 Conventional management approaches cannot meet the challenges faced by ocean and coastal ecosystems today Consequently national and international bodies have called for a shift toward more comprehensive ecosystem based marine management Synthesizing a vast amount of current knowledge *Ecosystem Based Management for the Oceans* is a comprehensive guide to utilizing this promising new approach At its core ecosystem based management EBM is about acknowledging connections Instead of focusing on the impacts of single activities on the delivery of individual ecosystem services EBM focuses on the array of services that we receive from marine systems the interactive and cumulative effects of multiple human activities on these coupled ecological and social systems and the importance of working towards common goals across sectors *Ecosystem Based Management for the Oceans* provides a conceptual framework for students and professionals who want to understand and utilize this powerful approach And it employs case studies that draw on the experiences of EBM practitioners to demonstrate how EBM principles can be applied to real world problems The book emphasizes the importance of understanding the factors that contribute to social and ecological resilience the extent to which a system can maintain its structure function and identity in the face of disturbance Utilizing the resilience framework professionals can better predict how systems will respond to a variety of disturbances as well as to a range of management alternatives *Ecosystem Based Management for the Oceans* presents the latest science of resilience while it provides tools for the design and implementation of responsive EBM solutions

Ecosystem-Based Management for the Oceans Karen McLeod, Heather Leslie, 2009-05-22 *Ecosystem Based Management for the Oceans* provides a conceptual framework for students and professionals who want to understand and utilize this powerful approach And it employs case studies that draw on the experiences of EBM practitioners to demonstrate how EBM principles can be applied to real world problems This pioneering book provides a crucial foundation for changing the way we understand and interact with our oceans and coasts through science management and policy [Best Practices in Ecosystem-based Oceans Management in the Arctic](#) Alf Håkon Hoel, 2009 **Towards Marine Ecosystem-based Management in the Wider Caribbean** Lucia Fanning, Robin Mahon, Patrick McConney, 2011 An approach that encompasses the human and natural dimensions of ecosystems is one that the Wider Caribbean Region knows it must adopt and implement in order to ensure the sustainable use of the region's shared marine resources This volume contributes towards that vision bringing together the collective knowledge and experience of scholars and practitioners within the Wider Caribbean to begin the process of assembling a road map towards marine ecosystem based management EBM for the region It also serves a broader purpose of providing stakeholders and policy actors in each of the world's sixty four Large Marine Ecosystems with a comparative example of the challenges and information needs required to implement principled ocean governance generally and marine EBM in particular at multiple levels Additionally the volume serves to supplement the

training of graduate level students in the marine sciences by enhancing interdisciplinary understanding of challenges in implementing marine EBM **Developing Objectives and Indicators for Marine Ecosystem-based Management : International Review of Marine Ecosystem-based Management Initiatives Throughout the World** Canada.

The IMLI Treatise On Global Ocean Governance David Joseph Attard, Malgosia Fitzmaurice, Alexandros Ntovas, 2018-07-11

The 1982 United Nations Convention on the Law of the Sea UNCLOS remains the cornerstone of global ocean governance However it lacks effective provisions or mechanisms to ensure that all ocean space and related problems are dealt with holistically With seemingly no opportunity for revision due to the Conventions burdensome amendment provisions complementary mechanisms dealing with such aspects of global ocean governance including maritime transport fisheries and marine environmental sustainability have been developed under the aegis of the United Nations and other relevant international organizations This approach is inherently fragmented and unable to achieve sustainable global ocean governance In light of the Sustainable Development Goals SDGs particularly Goal 14 the IMLI Treatise proposes a new paradigm on the basis of integrated and cross sectoral approach in order to realise a more effective and sustainable governance regime for the oceans This volume focuses on the role of the UN Specialized Agencies towards the development of effective and sustainable ocean governance by looking at the more elaborate mechanisms they developed in order to achieve the desired objectives laid down in UNCLOS From FAO to UNODC the volume examines how they ensure sustainable development and how much coordination exists among them

Marine environments support the livelihoods economies and quality of life for communities around the world But growth of coastal populations and increasing demands on marine resources are putting the future of ocean and coastal resources at risk through impacts such as overfishing wetland drainage climate change and pollution of coastal waters Given these demands it is vital to build capacity the people the institutions and technology and tools needed to manage ocean resources Unfortunately many capacity building efforts focus on specific projects rather than on capacity building as goal unto itself resulting in activities that are not funded or sustained past the typically short project lifetime This book finds that the most successful capacity building efforts meet the needs of a specific locale or region based on periodic assessments and include plans to maintain and expand capacity after the project ends The report recommends ways that governments and organizations can help strengthen marine protection and management capacity including conducting periodic program assessments making plans to sustain funding and developing leadership and political will The book was produced at the request of Gordon and Betty Moore Foundation the President s Circle of the National Academies the David and Lucile Packard Foundation the National Oceanic and Atmospheric Administration the National Science Foundation the Marisla Foundation and the Curtis and Edith Munson Foundation

Policy Proposals and Operational Guidance for Ecosystem-based Management of Marine Capture Fisheries Trevor J. Ward,2002

Environmental Management of Marine Ecosystems Md. Nazrul Islam,Sven Erik Jorgensen,2018-03-09 Ecosystem Based Management EBM is one of the most holistic approaches to protecting marine and coastal ecosystems as it recognizes the need to protect entire marine ecosystems instead of individual species After decades of pollution habitat degradation and overfishing now climate change and ocean acidification threaten the health of the ocean in unprecedented way Environmental Management of Marine Ecosystems illustrates the current status trends and effects of climate natural disturbances and anthropogenic impacts on marine ecosystems It demonstrates how to integrate different management tools and models in an up to date multidisciplinary approach to environmental management This indispensable guide provides several case studies from around the world and creates a framework for identifying management tools and their applications in coral reefs fisheries migratory species marine islands and associated ecosystems such as mangroves and sea grass beds It discusses the physical and chemical compositions of marine ecosystems along with the threats and actions needed to protect them The application

of model framework to several contemporary management issues include the modelling of harmful algal bloom dynamics understanding the dispersal of sea lice and the possible impacts on intertidal communities of the provision of novel offshore habitat The results of extensive research by an international team of contributors the Environmental Management of Marine Ecosystems is designed to inform scientists practitioners academics government and non government policymakers on the particularities of marine ecosystems and assist them in understanding the EBM approaches in means of mitigation and adaptation of human activities that result in sustainability These practices will help change the current methodologies used for resource assessment and the future regulations of marine resources

Ecosystem Approaches to the Management of Ocean-related Activities United Nations,2011 Healthy ecosystems provide invaluable functions and services that are essential to the marine environment and to human well being Unfortunately some human activities have had an adverse impact on the structure and functioning of marine ecosystems A multitude of stressors such as pollution overfishing coastal development invasive alien species and climate change have impaired the ability of these ecosystems to provide essential goods and services This training manual focuses on the development and implementation of an ecosystem approach to the management of human activities and their impacts on the marine environment An ecosystem approach is essentially an evolution of integrated coastal and ocean management with a greater emphasis on ecosystem goals and objectives and their outcomes
