Dynamic Modeling Simulation And Control Of Energy Generation Lecture Notes In Energy:

Dynamic Modeling, Simulation and Control of Energy Generation Ranjan Vepa, 2013-09-11 This book addresses the core issues involved in the dynamic modeling simulation and control of a selection of energy systems such as gas turbines wind turbines fuel cells and batteries The principles of modeling and control could be applied to other non convention methods of energy generation such as solar energy and wave energy A central feature of Dynamic Modeling Simulation and Control of Energy Generation is that it brings together diverse topics in thermodynamics fluid mechanics heat transfer electro chemistry electrical networks and electrical machines and focuses on their applications in the field of energy generation its control and regulation This book will help the reader understand the methods of modelling energy systems for controller design application as well as gain a basic understanding of the processes involved in the design of control systems and regulators It will also be a useful guide to simulation of the dynamics of energy systems and for implementing monitoring systems based on the estimation of internal system variables from measurements of observable system variables Dynamic Modeling Simulation and Control of Energy Generation will serve as a useful aid to designers of hybrid power generating systems involving advanced technology systems such as floating or offshore wind turbines and fuel cells The book introduces case studies of the practical control laws for a variety of energy generation systems based on nonlinear dynamic models without relying on linearization Also the book introduces the reader to the use nonlinear model based estimation techniques and their application to energy systems

Electric Aircraft Dynamics Ranjan Vepa, 2020-07-29 Electric Aircraft Dynamics A Systems Engineering Approach surveys engineering sciences that underpin the dynamics control monitoring and design of electric propulsion systems for aircraft It is structured to appeal to readers with a science and engineering background and is modular in format The closely linked chapters present descriptive material and relevant mathematical modeling techniques Taken as a whole this ground breaking text equips professional and student readers with a solid foundation for advanced work in this emerging field Key Features Provides the first systems based overview of this emerging aerospace technology Surveys low weight battery technologies and their use in electric aircraft propulsion Explores the design and use of plasma actuation for boundary layer and flow control Considers the integrated design of electric motor driven propellers Includes PowerPoint slides for instructors using the text for classes Dr Ranjan Vepa earned his PhD in applied mechanics from Stanford University California He currently serves as a lecturer in the School of Engineering and Material Science Queen Mary University of London where he has also been the programme director of the Avionics Programme since 2001 Dr Vepa is a member of the Royal Aeronautical Society London the Institution of Electrical and Electronic Engineers IEEE New York a Fellow of the Higher Education Academy a member of the Royal Institute of Navigation London and a chartered engineer
