Toward a Unified Theory of Development John P. Spencer, Michael S. C. Thomas, James L. McClelland, 2009 From William James to Sigmund Freud to Jean Piaget to B F Skinner scholars and parents have wondered how children move from the blooming buzzing confusion of infancy through the tumult of childhood and adolescence into adulthood Does development occur continuously over time or in a series of dramatic stages Is development driven by learning or by biological maturational processes What is the nature of experience and how does it generate change The study of development has always been

organized around these big questions And answers to these questions have a profound influence on daily life forming a framework for how parents think about their own children and influencing both national policy and educational curricula This book defines and refines two major theoretical approaches within developmental science that address the central issues of development connectionism and dynamical systems theory Spencer Thomas and McClelland have brought together chapters that provide an introduction overview and critical evaluation of each approach including three sets of case studies that illustrate how both approaches have been used to study topics ranging from early motor development to the acquisition of grammar They also present a collection of commentaries by leading scholars which offer a critical view from both an outsiders s and an insider s perspective The book is unique in the range of its treatment it begins to delineate how developmental science can incorporate advances within neuroscience and computational modeling and brings the new ideas of connectionism and dynamic systems theory into sharper focus clarifying their usefulness and explanatory power

Dynamic Systems of Development Paul van Geert,1994 The author shows how simple models based on mutual interactions between children and their environments explain not only smooth evolutions but also sudden jumps temporal regressions cycles and chaotic change in cognitive and language development A central concept of the system is non linearity small causes can have big effects and variables may be sensitive to threshold effects *Handbook of Child Psychology:*
