Dynamic Analysis of Weather and Climate Marcel Leroux, 1998-10-27 Dynamic Analysis of Weather and Climate Atmospheric Circulation Perturbations Climatic Evolution Marcel Leroux This is an up to date textbook on meteorology and climatology with a fresh unconventional view of the workings of the climate system in which the author poses serious questions about the validity of certain aspects of current global warming theory The book is divided into three parts In Part I the author discusses general circulation in the troposphere He argues that such circulation is driven by thermal deficit at the poles causing Moving Polar Highs MPHs which have the principal role of feeding cold air towards the tropics This in turn causes warm air to move up towards the poles The relief and distribution of land masses and the Earth's rotation control the trajectories of the MPHs and the formation of Anticyclonic Agglutinations AAs The latter determine the properties of tropical circulation the trade winds and tropical monsoons These discussions lead in Part II to a consideration of the dynamics of the weather through the study of perturbations including precipitation the role of MPHs in polar and temperate regions and at tropical margins pulsations in the trade winds and monsoons the concept of the meteorological Equator and tropical cyclones Part III reviews the causes of climatic variations including solar activity variations relating to the Earth's orbit and axial inclination volcanic eruptions and the anthropogenic greenhouse effect The book concludes with a discussion of Palaeoclimatic variations and recent climatic evolution including the Sahelian drought changes in polar and alpine glaciers and the El Nino Southern Oscillation Readership Undergraduate and postgraduate students in meteorology climatology palaeoclimatology geography environmental science atmospheric physics and environmental physics Lecturers and research scientists in these subjects and those concerned with regional and global climatic change Engineers and professionals in many fields such as agriculture forestry ecology and the management of land water and other natural resources **Climate Change and Water Resources in Africa** Salif Diop, Peter Scheren, Awa Niang, 2021-02-15 The focus of this book is on the key water related vulnerabilities to climate change in Africa particularly in its most vulnerable areas exploring potential management responses to such vulnerabilities The African countries are particularly exposed and vulnerable to the negative impacts of climate change with important impacts on water resources and hydrological systems water availability water resource management and sea level variations Already under various anthropogenic pressures the status of water resources in Africa has been changing over the past decades with decreasing water quality falling groundwater levels and variability in rainfall both in terms of timing and intensity Climate change will further accelerate the rate of change affecting the ability of people and societies to respond in a timely manner It is clear that there is no quick fix to the pressures imposed on water resources by climate change Increasing the resilience of ecosystems and communities to extreme events such as flooding and drought and integrating climate change risks and opportunities into development decision making is indeed a key challenge as much a technical climate change one as a political and developmental challenge The book in this regard intends to

contribute to the debate around climate change in relation to water resources management in Africa and in particular inform policy decisions and actions that will improve governments and communities ability to manage the challenges of climate change and variability in relation to the aquatic ecosystems that they depend on The knowledge collected in this book will benefit policy makers researchers as well as other stakeholders

**adaptation and vulnerability** ,2007      Climate and circulation of the tropics S. Hastenrath,2012-12-06 Tropical  
atmosphere and ocean are receiving increased attention in relation to the functioning of the global climate system the  
remarkable climatic variability in low latitudes and the associated manifold environmental and societal consequences Beyond  
the traditional emphasis of meteor ology on weather analysis and forecasting there is a growing interest in the climate and  
large scale circulation of the tropics This book may serve as a text for graduate and upper division undergraduate students in  
meteorology and is also intended as a reference work for practicing meteorologists and researchers in the atmospheric  
oceanic and other environmental sciences I began writing this book in 1979 but the roots reach further back Early  
experiences in North Africa fuelled my curiosity about the low latitudes In 1960 I seized the opportunity to work in the  
National Meteorological Service of El Salvador in Central America My interest in the tropics continued after joining the  
University of Wisconsin in 1963 Field research brought me to the equatorial Pacific and many times to the tropical Americas  
and Africa This involved visits and correspondence with many weather services My acquaintance with Australasia and South  
Asia is limited to short study visits but includes continuous contacts with colleagues at key research institutions in India  
namely the India Meteorological Department the Indian Institute of Tropical Meteorology and Andhra University A guest  
semester at the University of the Witwatersrand in 1971 and related travels provided a perspective on the problems of  
Southern Africa      **Temporal Climatology and Anomalous Weather Analysis** Weihong Qian,2017-02-20 By breaking  
down atmospheric variables into temporal climatologies and anomalies this book demonstrates that all weather extremes and  
climatic events are directly associated with the anomaly component of atmospheric motion We can use the anomaly based  
synoptic chart and dynamical parameters to objectively describe these extremes and events The conception and differences  
of weather climate and general circulation tend to confuse us because there are no clear physical definitions available for

them Weather extremes such as heat waves cold surges freezing rains heavy rains severe drought unusual storm tracks and tornados are common on our planet s surface Climatic events such as Arctic warming and declining sea ice have become hot topics in recent years An approach based on breaking down total variables into temporal climatologies and anomalies can be used to identify general circulation analyze climatic anomalies and forecast weather extremes Accordingly this book will appeal to students teachers and forecasters in the field of weather and climate alike

Climate Dynamics of the Tropics S. Hastenrath,2012-12-06 The first edition of my book Climate and Circulation of the Tropics was reasonably up to date to the middle of 1985 In a second printing in 1988 it was possible to complete a few literature references and to correct some misprints However vigorous research has taken place over the past five years in various areas of tropical climate dynamics especially in the atmosphere ocean mechanisms of climate anomalies climate prediction ocean circulation and paleoclimates Promising progress has also been made in the application of general circulation modelling to tropical climate problems In the present second edition named Climate Dynamics of the Tropics I have attempted to incorporate much of the recent work to late 1990 Chapters 8 and 9 have been essentially re written and major additions have been made to Chapters 4 and 12 in particular I would like to acknowledge the continued support by the U S National Science Foundation over the past five years B Parthasarathy Poona and H Lessmann San Salvador sent me updates of data series not easily accessible I have benefitted from discussions with numerous colleagues in the United States and overseas In the preparation of this second edition Marilyn Wolff patiently transferred my illegible hand written drafts onto word processor Dierk Polzin and Dan Skemp assisted me with the creation

of the page masters and the subject index and Christopher Collimore with the author index      **The Climatology of Air-Mass and Frontal Extreme Precipitation** Ewa Łupikasza, 2016-08-08 Based on a data series of more than 50 years this book discusses spatial and seasonal variability in air mass and frontal extreme precipitation frequency and as well as the relationship between their occurrence and atmospheric circulation The climatology of air mass and frontal extreme precipitation is presented for the first time on a European scale Since there is no robust automatic method of locating atmospheric fronts this challenging task has to be performed manually Moreover there is limited availability of the complex sub daily data that is necessary to recognize the dynamic of meteorological fronts The results show a clear regional and seasonal variety in the relationship between extreme precipitation occurrence and atmospheric circulation depending on precipitation origin The probability of air mass and frontal precipitation occurrence provides crucial information for studies in predictability and modeling This book is intended for students specialists in the field of climatology and climate change climate process modelers and other experts for whom extreme precipitation is important x
