Dynamic Wireless Sensor Networks Sharief M. A. Oteafy,Hossam S. Hassanein,2014-08-08 In this title the authors leap into a novel paradigm of scalability and cost effectiveness on the basis of resource reuse In a world with much abundance of wirelessly accessible devices WSN deployments should capitalize on the resources already available in the region of deployment and only augment it with the components required to meet new application requirements However if the required resources already exist in that region WSN deployment converges to an assignment and scheduling scheme to accommodate for the new application given the existing resources Such resources are polled from many fields including multiple WSNs already in the field static networks WiFi WiMAX cellular etc in addition to municipal industrial and mobile resources The architecture framework and pricing policy as well as approaches for backward compatibility with existing deployments are presented in this book We elaborate on the formalization of the problem and contrast with existing work on coverage This paradigm adopts optimal assignments in WSNs and exploits dynamic re programming for boosting post deployment and backward compatible protocols *Handbook of Sensor Networks* Mohammad Ilyas,Imad Mahgoub,2004-07-28 As the field of communications networks continues to evolve the challenging area of wireless sensor networks is rapidly coming of age Recent advances have made it possible to make sensor components more compact robust and energy efficient than ever earning the idiosyncratic alias ofSmart Dust Production has also improved yielding larger

Dynamic Security Protocol for Wireless Sensor Networks Adil Bashir,Ajaz Hussain Mir,2021-07-21 Master s Thesis from the year 2013 in the subject Computer Science Internet New Technologies grade 8 12 course M Tech language English abstract Wireless sensor network WSN is an emerging imperious leading technology of the current century that presents great promise for various pioneering applications The use of sensor networks should keep developing mainly in the fields of scientific logistic healthcare and military applications Sensor networks interact and collect sensitive data and operate in unattended hostile environments thus it is imperative to pay attention to the security of wireless sensor networks as they are highly prone to threats For successful operation of the nodes it is important to maintain the security and privacy of the transmitted data as well as the data stored at nodes The different security protocols and models used in the wired and other wireless networks such as ad hoc networks cannot be used in WSNs because the sensor size poses significant restrictions mainly in terms of energy autonomy and node lifetime as the batteries have to be too tiny Also the existing security protocols in these constrained networks are not sufficiently energy efficient which is the real motivation behind this work In this thesis a light weight dynamic security algorithm titled An Energy Efficient and Dynamic Security Protocol EEDSP for wireless sensor networks has been proposed and implemented at nodal level We also implement an existing algorithm and then carry out the performance analysis of both the algorithms in terms of energy consumptions node lifetime and memory requirements at source and intermediate nodes to verify the improvement in our protocol s results *Implementation of Machine Learning Algorithms Using Control-Flow and Dataflow Paradigms* Milutinović, Veljko,Mitić, Nenad,Kartelj, Aleksandar,Kotlar, Miloš,2022-03-11 Based on current literature and cutting edge advances in the machine learning field there are four algorithms whose usage in new application domains must be explored neural networks rule induction algorithms tree based algorithms and density based algorithms A number of machine learning related algorithms have been derived from these four algorithms Consequently they represent excellent underlying methods for extracting hidden knowledge from unstructured data as essential data mining tasks Implementation of Machine Learning Algorithms Using Control Flow and Dataflow Paradigms presents widely used data mining algorithms and explains their advantages and disadvantages their mathematical treatment applications energy efficient implementations and more It presents research of energy efficient accelerators for machine learning algorithms Covering topics such as control flow implementation approximate computing and decision tree algorithms this book is an essential resource for computer scientists engineers students and educators of higher education researchers and academicians **Emerging Research in Computing, Information, Communication and Applications** N. R. Shetty,N.H. Prasad,N. Nalini,2015-08-21 This proceedings volume covers the proceedings of ERCICA 2015 ERCICA provides an interdisciplinary forum for researchers professional engineers and scientists educators and technologists to discuss debate and promote research and technology in the upcoming areas of Computing Information Communication and their Applications The contents of this book cover emerging research areas in

fields of Computing Information Communication and Applications This will prove useful to both researchers and practicing engineers   *Secure Edge Computing* Mohiuddin Ahmed,Paul Haskell-Dowland,2021-08-12 The internet is making our daily life as digital as possible and this new era is called the Internet of Everything IoE Edge computing is an emerging data analytics concept that addresses the challenges associated with IoE More specifically edge computing facilitates data analysis at the edge of the network instead of interacting with cloud based servers Therefore more and more devices need to be added in remote locations without any substantial monitoring strategy This increased connectivity and the devices used for edge computing will create more room for cyber criminals to exploit the system s vulnerabilities Ensuring cyber security at the edge should not be an afterthought or a huge challenge The devices used for edge computing are not designed with traditional IT hardware protocols There are diverse use cases in the context of edge computing and Internet of Things IoT in remote locations However the cyber security configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of edge computing becomes wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of the network In this context this book addresses the cyber security challenges associated with edge computing which provides a bigger picture of the concepts techniques applications and open research directions in this area In addition the book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation computing and security It will be a valuable aid for researchers higher level students and professionals working in the area
