Dynamics Bifurcations And Control Lecture Notes In Control And Information Sciences:

Dynamics, Bifurcations and Control Fritz Colonius, Lars Grüne, 2002-01-11 This volume originates from the Third Nonlinear Control Workshop Dynamics Bifurcations and Control held in Kloster Irsee April 1-3 2001 As the preceding workshops held in Paris 2000 and in Ghent 1999 it was organized within the framework of Nonlinear Control Network funded by the European Union <http://www.supelec.fr/lss/NCN> The papers in this volume center around those control problems where phenomena and methods from dynamical systems theory play a dominant role Despite the large variety of techniques and methods present in the contributions a rough subdivision can be given into three areas Bifurcation problems stabilization and robustness and global dynamics of control systems A large part of the fascination in nonlinear control stems from the fact that is deeply rooted in engineering and mathematics alike The contributions to this volume reflect this double nature of nonlinear control We would like to take this opportunity to thank all the contributors and the referees for their careful work Furthermore it is our pleasure to thank Franchise Lamnabhi Lagarrigue the coordinator of our network for her support in organizing the workshop and the proceedings and for the tremendous efforts she puts into this network bringing the cooperation between the different groups to a new level In particular the exchange and the active participation of young scientists also reflected in the Pedagogical Schools within the Network is an asset for the field of nonlinear control

Dynamic Bifurcations Eric Benoit, 2006-11-14 Dynamical Bifurcation Theory is concerned with the phenomena that occur in one parameter families of dynamical systems usually ordinary differential equations when the parameter is a slowly varying function of time During the last decade these phenomena were observed and studied by many mathematicians both pure and applied from eastern and western countries using classical and nonstandard analysis It is the purpose of this book to give an account of these developments The first paper by C Lobry is an introduction the reader will find here an explanation of the problems and some easy examples this paper also explains the role of each of the other papers within the volume and their relationship to one another

Variable Structure Systems: Towards the 21st Century Xinghuo Yu, Jian-Xin Xu, 2003-07-01 The book is a collection of contributions concerning the theories applications and perspectives of Variable Structure Systems VSS Variable Structure Systems have been a major control design methodology for many decades The term Variable Structure

Systems was introduced in the late 1950 s and the fundamental concepts were developed for its main branch Sliding Mode Control by Russian researchers Emelyanov and Utkin The 20th Century has seen the formation and consolidation of VSS theory and its applications It has also seen an emerging trend of cross fertilization and integration of VSS with other control and non control techniques such as feedback linearization atness passivity based control adaptive and learning control system identi cation pulse width modulation H geometric and algebraic methods arti cial intelligence modeling and optimization neural networks fuzzy logic to name just a few This trend will continue and ourish in the new millennium To re ect these major developments in the 20th Century this book cludes 16 specially invited contributions from well known experts in VSS theory and applications covering a wide range of topics The rst chapter First Stage of VSS People and Events written by Vadim Utkin the founder of VSS oversees and documents the historical developments of VSS in the 20th Century including many interesting events not known to the West until now The second chapter An Integrated Learning Variable Structure Control Method written by Jian Xin Xu addresses an important issue regarding control integration between variable structure control and learning control

Identification of Nonlinear Systems Using Neural Networks and Polynomial Models Andrzej Janczak,2004-11-18 This monograph systematically presents the existing identification methods of nonlinear systems using the block oriented approach It surveys various known approaches to the identification of Wiener and Hammerstein systems which are applicable to both neural network and polynomial models The book gives a comparative study of their gradient approximation accuracy computational complexity and convergence rates and furthermore presents some new and original methods concerning the model parameter adjusting with gradient based techniques Identification of Nonlinear Systems Using Neural Networks and Polynomial Models is useful for researchers engineers and graduate students in nonlinear systems and neural network theory Mathematical Reviews ,2004 Theory of the Non-linear Analog Phase Locked Loop Nikolaos I. Margaris,2004-05-18 This book develops for the first time a complete and connected nonlinear theory for the analog Phase Locked Loop PLL which clarifies the obscure points of its complex non linear behaviour The book suggests new non linear models for the PLL components and applies the averaging method to analyse PLL The book presents the physical interpretation of the PLL operation locates the difficulties presented by its operation and suggests solutions to overcome these problems Finally it provides closed form expressions for all the important measures of the PLL and proposes new design criteria
