## **Documenting Software Architectures Views And Beyond:**

**Documenting Software Architectures** Paul Clements, 2003 Architecture is crucial to the success of any large software system but even a superb architecture will fail if it isn't communicated well. Now there's a language and notation independent guide to capturing architecture so it can be used successfully by every analyst, software designer, and developer. The authors review the diverse goals and uses of software architecture documentation, providing documentation strategies for several common scenarios. They identify the basic unit of software architecture documentation, the viewtype, which specifies the type of information to be provided in an architectural view. For each viewtype, Modules, Component, and Connectors, and Allocation, they offer detailed guidance on documenting what really matters. Next, they demonstrate how to package architecture documentation in coherent, usable form, augmenting architectural views with documentation of interfaces and behavior, accounting for architectural variability and dynamic systems, and more. **Documenting Software Architectures** Paul Clements, 2003 **Documenting Software Architectures**, 2011 **Summary Record of the 1st Part (public) of the 2199th Meeting, Held at the Palais Wilson, Geneva, on Tuesday, 13 July 2004**, 2004 **Comparing the SEI's Views and Beyond Approach for Documenting Software Architectures with ANSI-IEEE 1471-2000** Paul Clements, 2005 Abstract Architecture documentation has emerged as an important architecture related practice. In 2002, researchers at the Carnegie Mellon registered trademark Software Engineering Institute completed *Documenting Software Architectures Views and Beyond V B*, an approach that holds that documenting a software architecture is a matter of choosing a set of relevant views of the architecture, documenting each of those views, and then documenting information that applies to more than one view or to the set of views as a whole. Details of the approach include a method for choosing the most relevant views, standard templates for documenting views and the information beyond them, and definitions of the templates' content. At about the same time, the Institute of Electrical and Electronics Engineers (IEEE) was developing a recommended best practice for describing architectures for software intensive systems, ANSI IEEE Std 1471-2000. Like V B, that standard takes a multi-view approach to the task of architecture documentation and it establishes a conceptual framework for architectural description and defines the content of an architectural description. This technical note summarizes the two approaches and shows how a software architecture document prepared using the V B approach can be made compliant with Std 1471-2000. **Documenting Software Architectures** Paul Clements, Felix Bachmann, Len Bass, David Garlan, James Ivers, Reed Little, Paulo Merson, Robert Nord, Judith Stafford, 2010-10-05 Software architecture, the conceptual glue that holds every phase of a project together for its many stakeholders, is widely recognized as a critical element in modern software development. Practitioners have increasingly discovered that close attention to a software system's architecture pays valuable dividends. Without an architecture that is appropriate for the problem being solved, a project will stumble along or most likely fail. Even

with a superb architecture if that architecture is not well understood or well communicated the project is unlikely to succeed Documenting Software Architectures Second Edition provides the most complete and current guidance independent of language or notation on how to capture an architecture in a commonly understandable form Drawing on their extensive experience the authors first help you decide what information to document and then with guidelines and examples in various notations including UML show you how to express an architecture so that others can successfully build use and maintain a system from it The book features rules for sound documentation the goals and strategies of documentation architectural views and styles documentation for software interfaces and software behavior and templates for capturing and organizing information to generate a coherent package New and improved in this second edition Coverage of architectural styles such as service oriented architectures multi tier architectures and data models Guidance for documentation in an Agile development environment Deeper treatment of documentation of rationale reflecting best industrial practices Improved templates reflecting years of use and feedback and more documentation layout options A new comprehensive example available online featuring documentation of a Web based service oriented system Reference guides for three important architecture documentation languages UML AADL and SySML

**Documenting Software Architectures** Paul Clements,1900 This new edition is brighter shinier more complete more pragmatic more focused than the previous one and I wouldn't have thought it possible to improve on the original As the field of software architecture has grown over these past decades there is much more to be said much more that we know and much more that we can reflect upon of what's worked and what hasn't and the authors here do all that and more The Foreword by Grady Booch IBM Fellow Software architecture the conceptual glue that holds every phase of a project together for its many stakeholders is widely recognized

**Documenting Software Architectures**, 2003 Creating and Using Software Architecture Documentation Using Web-based Tool Support Judith Alyce Stafford, 2004 Abstract Documenting software architecture DSA is a crucial facet in the development of a software system yet often it is carried out in a haphazard fashion if at all Lack of attention to the documentation results from insufficient guidance about what should be documented and when and how to capture the information so that system stakeholders find it useful The book Documenting Software Architectures Views and Beyond provides such guidance in the DSA approach and this report describes the conceptual design for a documentation system based on that approach A system is envisioned that enables the architect to capture architectural decisions and related artifacts as a living repository that can communicate information to stakeholders who might be both geographically and temporally distributed The system must communicate in a way that allows each stakeholder quick and easy access to information relevant to the person's role in the software development process This report describes a design prototype that demonstrates a Web based approach to creating communicating and using software architecture throughout the life of the system

**Documenting Software Architectures in an Agile World** Paul Clements, 2003 Abstract This report compares

the Software Engineering Institute's Views and Beyond approach for documenting software architectures with the documentation philosophy embodied in agile software development methods This report proposes an approach for capturing architecture information in a way that is consistent with agile methods

**Documenting Software Architectures** Felix Bachmann, 2001 Abstract This report represents a milestone of a work in progress That work is a comprehensive handbook on how to produce high quality documentation for software architectures The handbook tentatively entitled Documenting Software Architectures will be published in early 2002 by Addison Wesley Longman as part of the SEI Series on Software Engineering Since this report is a snapshot of current work the material described here may change before the handbook is published The theme of the report is that documenting an architecture entails documenting the set of relevant views of that architecture and then completing the picture by documenting information that transcends any single view The audience for Documenting Software Architectures is the community of practicing architects apprentice architects and developers who receive architectural documentation

**Software Architecture**, 2005 *Proceedings / 10th Working Conference on Reverse Engineering, WCRE 2003 : Victoria, B.C., Canada, 13 - 16 November 2003* Working Conference on Reverse Engineering, 2003 *Software Architect Bootcamp* Raphael C. Malveau, Thomas J. Mowbray, 2004 bull Fully revised and updated to reflect the latest trends in software architecture bull Allows you to execute heavyweight or lightweight approaches to architecture and identify the best architectural model for any project bull Added coverage of UML 2.0 and Model Driven Architecture

**ICSE**, 2003 **Software Development**, 2005 *A Structured Approach for Reviewing Architecture Documentation* Robert Nord, 2009 Abstract This technical note proposes a structured approach for reviewing architecture documentation Given the critical importance of architecture to software project success it follows that the architecture cannot be effective unless it is effectively captured in documentation that allows the architecture's stakeholders to understand and use the architecture in the way it was intended The approach does not assume a particular architecture methodology or a particular architecture documentation practice although it was conceived in the context of the International Organization for Standardization ISO Recommended Practice for Architecture Description of Software Intensive Systems and the SEI Views and Beyond approach to documenting software architectures Like both of them our approach is centered on the stakeholders of the artifact engaging them in a focused guided way to ensure that the documentation carries sufficient quality to enable them to do their jobs and to help them point out gaps and weaknesses Our approach is not intended as a complete framework for architecture evaluation rather it is meant to be used within such a framework when one is available

**Documenting Software Architectures** David Garlan, João Pedro Sousa, 2000 Abstract An important issue for software system development is the documentation of architecture designs In this report we describe techniques for the architectural documentation of software based systems in the context of development processes that use UML for software design The architectural documentation is organized in four kinds of views problem domain view code view run time

view and deployment view We examine JavaPhone TM as a case study to illustrate the approach what kinds of information are provided in each kind of view what forms of notation should be used what are their limitations and what uses can be made of this documentation      *A Framework for Compositional Design and Analysis of Systems* Arindam Chakrabarti,2007
