False Memory Creation In Children And Adults Theory Research And Implications:

False-memory Creation in Children and Adults David F. Bjorklund, 2000-05-01 As one of the most hotly debated topics of the past decade false memory has attracted the interest of researchers and practitioners in many of psychology's subdisciplines Real world issues surrounding the credibility of memories particularly memories of traumatic events such as sexual abuse reported by both children and adults have been at the center of this debate Were the adults actually retrieving repressed memories under the careful direction of psychotherapists or were the memories being created by repeated suggestion Were children telling investigators about events that actually happened or were the interviewing techniques used to get at unpleasant experiences serving to implant memories that eventually became their own There is evidence in the psychological research literature to support both sides and the potential impact on individuals families and society as a whole has been profound This book is an attempt to cut through the undergrowth and get at the truth of the recovered memory false memory creation puzzle The contributors review seminal work from their own research programs and provide theory and critical evaluation of existing research that is necessary to translate theory into practice The book will be of great value to basic and applied memory researchers clinical and social psychologists and other professionals working within the helping and legal professions

Lifespan Development of Human Memory Peter Graf (PhD.), Nobuo Ohta, 2002 An original approach to memory development that views memory as a continuous process of growth and loss over the human lifespan rather than as a series of separate periods Until recently the vast majority of memory research used only university students and other young adults as subjects Although such research successfully introduced new methodologies and theoretical concepts it created a bias in our understanding of the lifespan development of memory This book signals a departure from young adult centered research It views the lifespan development of memory as a continuous process of growth and loss where each phase of development raises unique questions favoring distinct research methods and theoretical approaches Drawing on a broad range of investigative strategies the book lays the foundation for a comprehensive understanding of the lifespan development of human memory Topics include the childhood and adulthood development of working memory episodic and autobiographical memory and prospective memory as well as the breakdown of memory functions in Alzheimer's disease Of particular interest is the rich diversity of approaches methods and theories The book takes an interdisciplinary perspective drawing on work from psychology psychiatry gerontology and biochemistry

Gorman,2002 **Bicultural Identities** Chi-Ying Cheng,2005 The Impact of Internal and External Influences on Memory and their Relevance to Legal Decisions Fabiana Battista,Antonietta Curci,Ivan Mangiulli ,Henry Otgaar,2024-08-02 The fallibility of memory has been often demonstrated A plethora of studies has focused on external influences that can affect memory reports such as suggestive questioning Adopting different paradigms e g misinformation memory conformity the recurrent pattern of findings of these studies is that suggestion can make people prone to falsely recall details that were never experienced i e commission errors false details In addition suggestion can make them unable to recall truly experienced events or event related details However internal influences can also affect memory One such internal influence is deception In the last decade several studies have investigated how memory can be affected by deception Specifically these studies have shown that a person who has intentionally deceived the listener about an experienced event subsequently when the person comes forward with the truth shows an impaired memory for such an event This line of research examined the detrimental effects on memory by taking into account different strategies to deceive e g false denials feigned amnesia and fabrication and found that the memory outcomes due to deception can vary based on the strategy used to deceive A number of studies has also demonstrated that another type of deception known as self deception can influence our memory This strategy relies on the act of deceiving our own selves and seems to reduce the recall of negative memories The understanding of the effects of external e g suggestion and internal e g deception self deception on memory is important not only in order to gain more fundamental information on how memory works but also because of the relevance of memory functioning within the legal context Memory distortions for example inaccurate eyewitness testimony can lead to impactful legal decisions such as wrongful convictions Several studies have underlined the harmful consequences of distorted statements Additional support is found in databases from various worldwide associations who strive to obtain fair justice for people involved in wrongful convictions cases for instance www.innocenceproject.org Therefore it is important that researchers continue to provide evidence on the mnemonic impact of internal and external factors that influence legal practitioners to help avoid miscarriages of justice *The British National Bibliography* Arthur James Wells,2002 The Writers Directory ,2013 **Philosophical Transactions of the Royal Society of London** ,2001 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest standards Published on the 29th of each month Transactions B is essential reading for all biologists **Criminal Justice Review** ,2006 Children's Testimony Helen L.
