argues that a long tradition of human exceptionalism in paleoanthropology has distorted the picture of human evolution Drawing partly on his own career from young scientist in awe of his elders to crotchety elder statesman Tattersall offers an idiosyncratic look at the competitive world of paleoanthropology beginning with Charles Darwin 150 years ago and continuing through the Leakey dynasty in Africa and concluding with the latest astonishing findings in the Caucasus The book's title refers to the 1856 discovery of a clearly very old skull cap in Germany's Neander Valley The possessor had a brain as large as a modern human but a heavy low braincase with a prominent brow ridge Scientists tried hard to explain away the inconvenient possibility that this was not actually our direct relative One extreme interpretation suggested that the preserved leg bones were curved by both rickets and by a life on horseback The pain of the unfortunate individual's affliction had caused him to chronically furrow his brow in agony leading to the excessive development of bone above the eye sockets The subsequent history of human evolutionary studies is full of similarly fanciful interpretations With tact and humor Tattersall concludes that we are not the perfected products of natural processes but instead the result of substantial doses of random happenstance

Integrative Paths to the Past Robert S. Corruccini, Russell L. Ciochon, 1994 A multidisciplinary overview of the entire field of evolutionary studies written to honor the trailblazing paleoanthropologist F Clark Howell and his interdisciplinary view of the search for human origins

**From Lucy to Language** Donald C. Johanson, Blake Edgar, 1996 Now revised and updated this groundbreaking volume by one of the world's foremost paleontologists presents the most complete visual proof ever assembled of the evidence for human evolution displaying in full color all the key fossils and artifacts of human prehistory

**Why Machines Will Never Rule the World** Jobst Landgrebe, Barry Smith, 2025-04-30 This is a revised and expanded second edition of *Why Machines Will Never Rule the World* Its core argument remains the same that an artificial intelligence AI that could equal or exceed human intelligence sometimes called artificial general intelligence AGI is for mathematical reasons impossible It offers two specific reasons for this claim Human intelligence is a capability of the human brain and central nervous system which is a complex dynamic system Systems of this sort cannot be modelled mathematically in a way that allows them to operate inside a computer In supporting their claim the authors Jobst Landgrebe and Barry Smith marshal evidence from mathematics physics computer science philosophy linguistics biology and anthropology setting up their book around three central questions What are the essential marks of human intelligence What is it that researchers try to do when they attempt to achieve Artificial Intelligence AI And why after more than 50 years are our interactions with AI for example when on the telephone with our bank's computers still so unsatisfactory The first edition was published the same week that ChatGPT was unleashed onto the world This second edition shows how the arguments in the book apply already to Large Language Models such as ChatGPT This new edition also brings up to date the arguments relating to the limits of AI showing why AI systems are best viewed as pieces of mathematics which cannot think feel or will They also demolish the idea that with the help of AI we could solve physics in a way that would allow us to create in the cloud

a perfect simulation of reality in which we could enjoy digital immortality Such ideas reveal a lack of understanding of physics mathematics human biology and computers There is still as the authors demonstrate in an updated final chapter a great deal that AI can achieve which will benefit humanity But these benefits will be achieved without the aid of systems that are more powerful than humans which are as impossible as AI systems that are intrinsically evil or able to will a takeover of human society Key Changes to the Second Edition Shows how the arguments of the first edition apply also to new Large Language Models Adds a treatment of human practical intelligence of knowing how vs knowing that a topic that is ignored by the AI community Demonstrates why AI ethics should be relabelled as ethics of human uses of AI Adds a new chapter showing the essential limitations of physics providing a thorough grounding for the arguments of the book Demolishes the idea that we might already be living in a simulation      **Human Body Size and the Laws of Scaling** Thomas T.

Samaras,2007 Several books have been published on scaling in biology and its ramifications in the animal kingdom However none has specifically examined the multifaceted effects of how changes in human height create disproportionately larger changes in weight surface area strength and other physiological parameters Yet the impact of these non linear effects on individual humans as well as our world s environment is enormous Since increasing human body size has widespread ramifications this book presents findings on the human species and its ecological niche its community and how the species interacts with its environment Thus a few chapters provide an ecological overview of how increasing human body size relates to human evolution fitness health survival and the environment This book provides a unique purview of the laws of scaling on human performance health longevity and the environment Numerous examples from various research disciplines are used to illustrate the impact of increasing body size on many aspects of human enterprises including work output athletics and intellectual performance      Hominid Evolution and Community Ecology Robert Foley,1984      *College of Science Record* ,1968      **Hominid Origins** Kathleen J.
